

## Function Generator

Manufacturer: IWATSU ELECTRIC CO., LTD.

**Model: SG-4208**

### Features

Modulation functions: AM, FM, PM, ASK, FSK, PSK, PWM

Easy operation with 4.3 inch touch screen

### Specifications

|                             |                                                                                                 |
|-----------------------------|-------------------------------------------------------------------------------------------------|
| Max Frequency               | : 80MHz                                                                                         |
| Channel                     | : 2                                                                                             |
| Sample Rate                 | : 1.2GSa/s                                                                                      |
| Basic Waveform              | : Sine, Square, Ramp, Pulse, Noise                                                              |
| Built-in Arbitrary Waveform | : including Sinc, Exponential Rise, Exponential Fall, ECG, Gauss, HaverSine, Lorentz, Dual-Tone |
| Resolution                  | : 1μHz                                                                                          |
| Accuracy                    | : ±1 ppm of the setting value                                                                   |
| Display                     | : 4.3-inch TFT LCD                                                                              |
| Full modulation supported   | : AM, FM, PM, ASK, FSK, PSK and PWM                                                             |
| Display                     | : 4.3inch color TFT LCD with Touch screen                                                       |
| Power                       | : 220V, 50Hz, 1-phase                                                                           |
| Dimensions                  | : W260 x D296 x H107 mm, 3.43kg                                                                 |
